VULKAN OPTIMUM
New Material for
Conveyor Belts

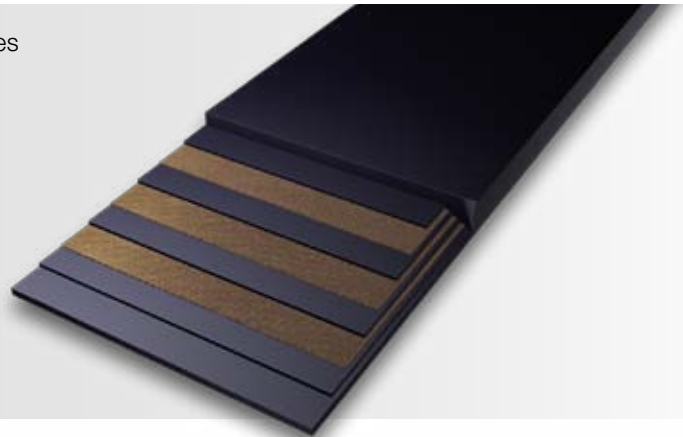

Newly developed and full of advantages:

VULKAN OPTIMUM raises the bar

The ContiTech Conveyor Belt Group has developed a new material for conveyor belts: VULKAN OPTIMUM. It replaces the well-known VULKAN T200. A modified polymer composition and an optimized crosslinking system gives VULKAN OPTIMUM the following beneficial properties:

- ▶ Improved thermal resistance to temperatures 200 - 600°C.*
- ▶ 30% stronger cover compound compared with the previous type.
- ▶ The adhesive values remain constant even under extreme thermal loads. Please contact us for further information.
- ▶ A specially adapted splicing material makes the job easier.

* The maximum temperatures depend on the form of the material, the time influence and the construction of the installation.
